The analysis and policy recommendations of this Report do not necessarily reflect the views of the Mohammed bin Rashid Al Maktoum Foundation or the United Nations Development Programme, its Executive Board Members or UN Member States. The Report is the work of an independent team of authors jointly sponsored by the Regional Bureau for Arab States at UNDP, and the Mohammed bin Rashid Al Maktoum Foundation.

This work was originally published in Arabic. In case of discrepancy, the original language shall take precedence.

### Foreword

## Chairman of the Board Mohammed bin Rashid Al Maktoum Foundation

## Arab World's Transition to Knowledge Society

Knowledge is considered as one of the key pillars of a nation's development and advancement, and critical to the society's progress and prosperity. It is an incentive for intellectual and social mobilisation as well. The current era is called the "knowledge era". If every era had its own wealth, this era's wealth would be knowledge. The knowledge society is the society of the digital revolution, which has contributed to the change of relationships in the developed societies and perceptions about of the outside world. Information and knowledge have contributed to enhanced standards of living, defined artistic tastes and values, and helped speed up development and industrial progress. Knowledge accumulation also plays a major role in sustaining economic growth.

By projecting the mobilisation of global knowledge on Arab realities, we find a big gap in the level of education and curricula and the volume of investments in education and research. Distinctions are evident in terms of the number of patents, and the volume of community participation, as well as in youth enrolment in the transfer of knowledge and the shift from consumer societies to productive societies. Together, these issues form an integrated system for building knowledge-based societies.

From this perspective, we find it necessary to empower youth by reviewing the school and university curricula, promoting research through well-equipped schools and universities, and supporting researchers in specialised centres. We need a comprehensive vision based on a series of factors such as:

freedom of thought, promotion of creativity in arts and sciences, equal opportunities for all citizens, transfer of knowledge through translations into Arabic, experiments, methodical research, exchange of expertise, continuing education, review of records and documentations, seminars, workshops and trainings, as well as other channels.

The Arab Knowledge Report comes as an indicator of the status of knowledge in the Arab countries. It presents a diagnosis of the situation to help those in charge to evaluate performance and implement development policies for building knowledge societies capable of facing challenges, and contributing to comprehensive and sustainable development. The third Report focuses on the importance of integrating youth in the transfer and localisation of knowledge processes in terms of its definition as well as economic and social benefits and priorities. The elements of localisation of knowledge are limited to two major integrated elements; the first being the production of knowledge and the second the employment of knowledge in human development in its cultural, scientific, social, political and environmental dimensions.

There is no doubt that the United Arab Emirates has made great progress in the development of dissemination and localization of knowledge through a number of initiatives, programs and projects. These together have helped the country overcome challenges and build knowledge based community and an environment that will ensure the sustainability of development and prosperity.

In an attempt to study the opportunities, threats and strategies in the successful integration of the Emirati youth in the transfer and localisation of knowledge on the national level, this UAE version of the Knowledge Report considers the main elements that would enhance the effectiveness of the youth and their participation in employing knowledge in sustainable human development.

We present before you the "Third Arab Knowledge Report: Youth and the Localisation of Knowledge" that includes a special report of the status of knowledge in UAE. We hope that both the reports will present a clear and comprehensive picture of our local and regional knowledge status, highlight the strengths and the ways to exploit them, and identify the areas that need further development. We believe that the reports will act as a road map for decision makers, providing them an overview of the means and methods in the transfer and localisation of knowledge in our Arab world.

Sheikh Ahmed bin Mohammed bin Rashid Al Maktoum Chairman of the Board Mohammed bin Rashid Al Maktoum Foundation

### Preamble

## Regional Director Regional Bureau for Arab States, United Nations Development Programme

The publication of this special report on youth and the localisation of knowledge in the UAE comes within the strategic partnership and the shared vision that brings together the Mohammed bin Rashid Al Maktoum Foundation and the Regional Bureau for Arab States at the UNDP in support of establishing knowledge societies for development purposes, and within the framework of the Third Arab Knowledge Report 2014.

This report presents a comprehensive view of the status of the Emirati youth, its capabilities and cognitive effectiveness, along with the available enabling environments. Similar to the previous knowledge reports, the current one is characterised by studies and surveys conducted with representative samples of Emirati youth in the final academic year in all public universities in the country. The report also highlights the opinions of young people and various stakeholders on the status of the youth today and the localisation of knowledge. These opinions were given during a series of field studies and workshops carried out while drafting the report. As such, the report has become, whether through its dialectics, outputs or recommendations, a unique platform for the UAE youth and stakeholders, where opinions are expressed and solutions proposed, and it explores several aspects that require attention, whether in the course of avoiding obstacles or capitalising on achievements.

The UAE has had remarkable achievement in development, and in record time. Since

the beginning, building and enabling the UAE citizen have been among the adopted objectives, which have been accompanied by a political will, supported by an honest societal will and the awareness of the importance of catching up with developed countries. The persistent quest to establish the knowledge society and economy in the UAE represents one of the most important manifestations of these trends and policies. As confirmed in the report, the strategies and mechanisms proposed are not only applicable, but also enjoy the availability of most, if not all, conditions for their success. The UAE enjoys a developed information infrastructure and a strong economy, as well as a clear recognition of the importance of building the knowledge society and actively engaging the youth in this central development process.

I present my most sincere thanks and appreciation to everyone who participated in this great endeavour, including experts, researchers, as well as writers and editors, the UNDP and Mohammed bin Rashid Al Maktoum Foundation teams. My thanks also go to the UAE youth and everyone who contributed to the field research and workshops whose outputs formed the main material for this report.

At the end, I can only express my deepest respect, appreciation and thanks to H.H. Sheikh Mohammed bin Rashid Al Maktoum for his sponsorship and continuous support for the initiatives to establish the knowledge society, not only in the UAE, but also in the Arab region and the entire world. I reiterate the honour

to have this partnership at UNDP with the Mohammed bin Rashid Al Maktoum Foundation and our dedication to develop it further, to achieve our common vision of establishing knowledge societies and sustainable development for the people in the Arab region and beyond.

Sima Bahous Assistant Secretary General Regional Director - The Regional Bureau for Arab States United Nations Development Programme
